## Atelier Deuber

Assistants Elena Miegel, Anita Morvillo

In our atelier students are given the opportunity to search for architectural elements that define their architecture: structure and space. Each student engages intensively with elements in architecture and develops a detailed project with the help of a clear, deep meaning. Students are given the opportunity to deal intensively with an architectural masterpiece. At the beginning of the semester each student travels to study architectural elements in masterpieces of his/her choice. After the individual excursion, each student will select an element of a masterpiece and build one physical model which represents the thought behind the selected building. Each student will get to the bottom of its idea and plastically transforming it into a three-dimensional object.

With this object, we represent a thought that the building carries. Dealing with such a structure is a convention with a soulmate that inspires.

A title is given and translated into elements that indicate a whole and make deep sense. A program for a specific location is derived and a detailed building will be developed.

Technique: concrete model making, photography, 1:50/1:20 CAD drawings, text / work: alone / study trip: independent travel of the students during the second semester week / meeting: the beginning is on Friday 20th September, 10:00, Atelier Deuber.
